

## Nature trail

On the path connecting the “Fiore di pietra” with the middle station of Bellavista, you’ll find 12 information panels which invite hikers to stop for a moment to notice some particular natural characteristics of the mountain. Every panel has drawings and texts in four languages, explaining in a clear and simple way the marine origin of Monte Generoso, the geological events it has undergone, the impact of glaciation and the natural features of its environment. The 12 panels are particularly devoted to plants, pollination, the colors of the flowers, forests, rocks, caves, fossils, Karst features, butterflies and chamois.
